

The 42nd International Conference on Software Engineering

ICSE 2020 

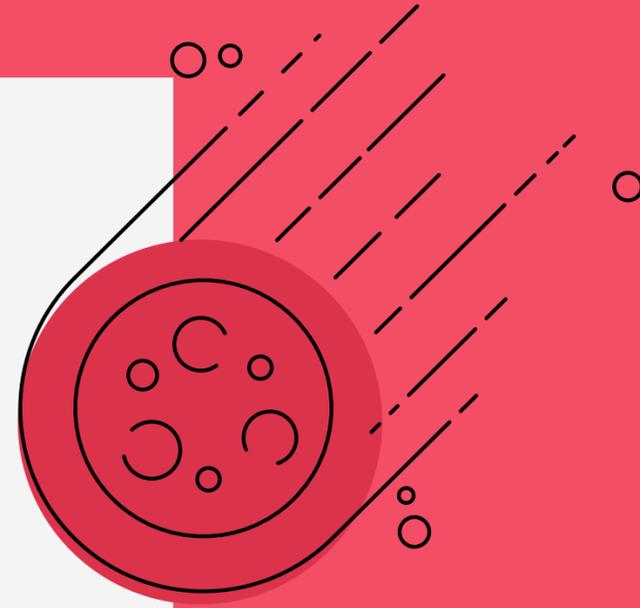

Demonstrations Track

VITALSE

A Visualization Tool for Biometric
Data in Software Engineering

- 1 Research at the intersection of neurocognitive science and software engineering is new and growing quickly.
- 2 Researchers are using medical imaging technology to model the cognitive process of developers as they interact with software artifacts.
- 3 No tool support exists to help researchers analyze and visualize multimodal biometric data over source code elements

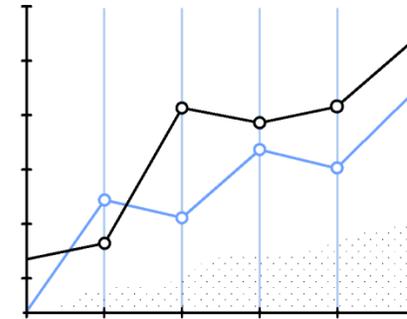

Software Engineering Enters the **NEUROAGE**

VITALSE

- Interactive and customizable heatmaps
- Temporal brushing support, for time specific analysis
- Custom metric visualization
- Annotate points of interest in your experiment data over software artifacts
- Fully customizable for research needs

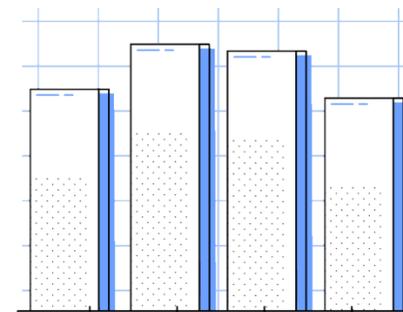

Synchronized
